APPLICATION FOR PUBLIC WATER SUPPLY WELL SITE INSPECTION

PART 1: TO BE COMPLETED BY PROPERTY OWNER							
Name			Phone				
Mailing Address			Zip Code	_Parcel #			
Location							
Project		Section	Township	_Range			
Engineer involved in projectSubmitted By							
Purpose:	oup B Water System Gro	up A Water System	Other				

PROVIDE A SCALED SITE PLAN WITH APPLICATION EXAMPLE ON BACK

In answering the following, the term well site means all the area within one hundred feet of the well; the term well means the spot where the well is to be drilled or is already drilled. A Yes answer means agreement with the statement or question. Yes No 1. Map provided was accurate, based on your observation at the well site? 2. Slope of ground within well site and beyond is not such as to endanger well from possible run-off Contamination? 3. No evidence of existing sources of contamination within 100 feet of the well? 4. If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? 5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing? E. Does casing extend at least 12 inches above slab?	PART 2	2: TO BE COM	IPLETED BY INSPECTOR						
1. Map provided was accurate, based on your observation at the well site? 2. Slope of ground within well site and beyond is not such as to endanger well from possible run-off Contamination? 3. No evidence of existing sources of contamination within 100 feet of the well? 4. If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? 5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?									
 Slope of ground within well site and beyond is not such as to endanger well from possible run-off Contamination? No evidence of existing sources of contamination within 100 feet of the well? If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing? □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □ □				Yes	No				
Contamination? No evidence of existing sources of contamination within 100 feet of the well? If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	1.	Map provided v	was accurate, based on your observation at the well site?						
3. No evidence of existing sources of contamination within 100 feet of the well? 4. If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? 5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	2.	Slope of ground	l within well site and beyond is not such as to endanger well from possible run-off						
4. If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained in a manner which safely conducts surface run-off away from well? 5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?		Contamination							
in a manner which safely conducts surface run-off away from well? 5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	3. No evidence of existing sources of contamination within 100 feet of the well?								
5. If well is an existing well: A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	4. If public or private roads pass within 100 feet of the well, are they now ditched or otherwise drained								
A. Does ground slope away from immediate vicinity of the well? B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	in a manner which safely conducts surface run-off away from well?								
B. Is well adequately sealed and covered? C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?	5.	If well is an exi	sting well:						
C. Is visible construction in sound condition? (concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?		A.	Does ground slope away from immediate vicinity of the well?						
(concrete, piping, electrical, floor slab, building) D. Is there a substantial concrete slab poured around the well casing?		В.	Is well adequately sealed and covered?						
D. Is there a substantial concrete slab poured around the well casing? \Box		С.	Is visible construction in sound condition?						
·			(concrete, piping, electrical, floor slab, building)						
E. Does casing extend at least 12 inches above slab? \Box		D.	Is there a substantial concrete slab poured around the well casing?						
		Е.	Does casing extend at least 12 inches above slab?						
6. In your opinion, is the overall well site satisfactory? \Box	6. In your opinion, is the overall well site satisfactory?
